

Socially Responsible Web Payments with GNU Taler

Cash is going out of Fashion

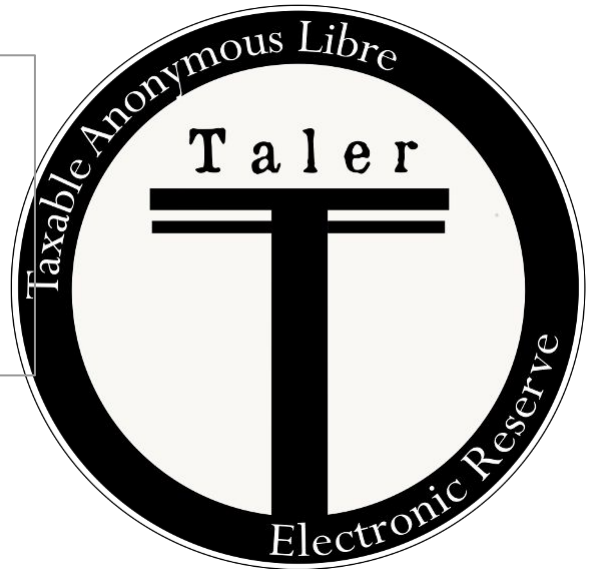

We need an Alternative

That ...

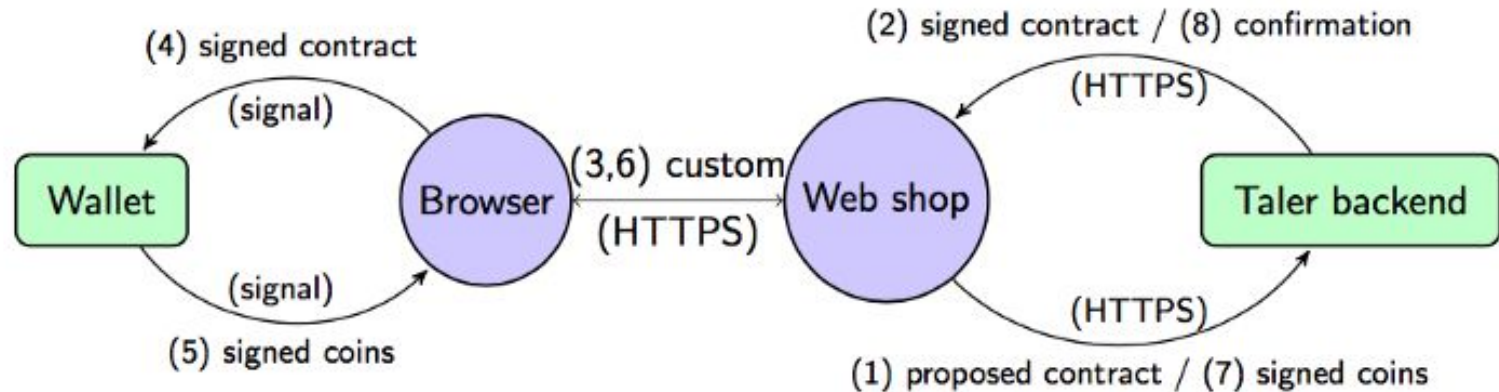

- conserves resources
- hides sensitive customer (meta-)data
- confirms payments immediately
- has accountability to prevent tax evasion, money laundering and illicit activities
- offers native integration of end-user web payments

What is GNU Taler?

- Payment Protocol Specification (based on blind signatures)
- Backend: Reference Implementations
- Customer: Portable Browser Extension

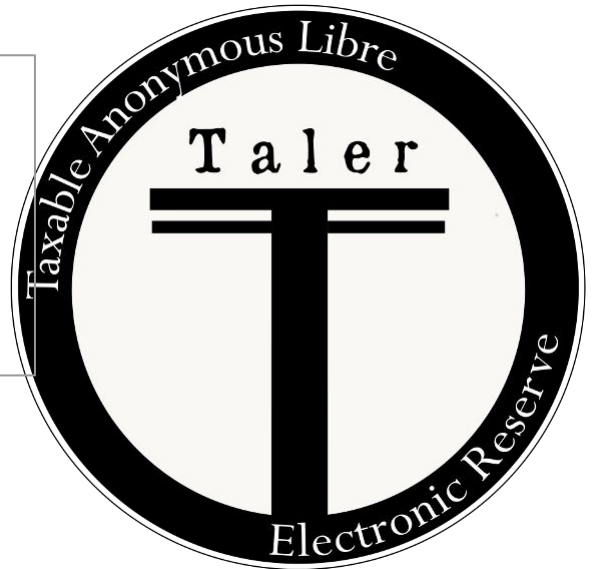

What is GNU Taler?

What is GNU Taler **NOT**?

- **NOT** a new (crypto-)currency
- **NOT** dependent on a block chain
- **NOT** completely anonymous (by design!)

We need **you**

- try our demo
- help with translation
- build applications that accept Taler payments
